Embedded Systems

INTEREST

Artificial Intelligence
Deep learning

Data Analysis

EXPERIENCES

Supervisory Board Member

- I serve in the community of our department at the university.
- I control the moderation of the community

PROJECTS

PHARMAVENT MOBILE APPLICATION

This project covers the design and development of a mobile application called Pharmavent, which aims to access health and pharmaceutical information quickly and accessible.
My task in this project is to develop an android application with Kotlin.

DISABLED LIVING SYSTEM

In this project, we are developing an application that provides solutions to the communication problems experienced by disabled individuals.
This application aims to facilitate the daily lives of people with disabilities and support their full participation in society.
We gained the right to participate in the 2024 TEKNOFEST Barrier-Free Life Technologies Competition Finals by being among the top 28 teams with our FutureForge team.

INTERNSHIP

I completed my internship at Kontrolmatik Technologies company in the Controlix department as a software developer, IoT platform and Embedded Systems.
In this internship, I learned about Arduino, ESP32, STM32 cards, integrated these cards into embedded systems, and then successfully completed the projects of sending and listening to data from sensors and communication.
